What's New in Cleo EEI v7.1

Cleo EEI v7.1 introduces several new features, many of which are closely interconnected, supporting the functions of other features.

Uptime Maintenance

Uptime Maintenance is an option that enhances the ability to reorganize files using the DLTDTA command. As part of normal command usage, you can purge with or without reorganizing (i.e. reclaiming freed-up memory), print logs marked for deletion, and other tasks. With Uptime Maintenance you can reorganize with a major reduction in the disruption of your ongoing processing of inbound and outbound records.

For more information, please see *Purging/Using DLTDTA/Uptime Maintenance* in the Cleo EEI User Guide.

Work with Errors

This Mailroom panel provides a central location to view errors. You are able to troubleshoot and resolve these errors by drilling down from here to other panels specific to the type of error. You can access this panel from the *Cleo EEI Main Menu* |1. *Mailroom* |24. *Work with errors* panel.

For more information, please see *The Mailroom/Troubleshooting/Work with errors* in the Cleo EEI User Guide.

Send Error Notification

Configure Cleo EEI to generate and send notifications when errors occur in your environment, by using the Error Notification (ER) Exit Point to call the **EPERRNOTFR** program.

For more information, please see *The Mailroom/Troubleshooting/Error Notifications* in the Cleo EEI User Guide.

Trading Partner Authorization

Use an Authorization List to manage the access users have to trading partners. An Authorization List can allow or deny user access to options in a trading partner. Without this list, full access is granted to all users. By applying the Authorization List, all users are restricted except for those included in the list.

For more information, please see *Trading Partner/Trading Partner Message Class Overrides/Trading Partner Authorization* in the Cleo EEI User Guide.

User Guide updates & Miscellaneous bug fixes/performance improvements

The Cleo EEI User Guide has been updated to include information related to the above descriptions.
